Document Driven Programming System Produces Custom Software Applications for Mobile Computing Devices

Rovenet, Inc files patent application prepared by Scully, Scott, Murphy & Presser

Garden City, NY -- Rovenet, Inc, a software development company focused on mobile computing applications, and Scully, Scott, Murphy & Presser, a leading Intellectual Property Law firm, have announced that a patent application has been prepared and filed for a document driven programming system and methodology that enables the creation of software applications for handheld and wireless mobile computing devices. The system extracts variable definition information from documents created in a variety of commonly used text editor programs. The resulting custom software applications are then available for use on a variety of handheld and wireless mobile computing devices.

"We found that the great promise of mobile computing was being held back by complicated and time-consuming custom application development," said Chuck Schwartz, President of Rovenet. "Our technology addresses this issue with solutions that are easy to use, intuitive and affordable."

"The Rovenet patent filing is typical of the advanced technology patent work that we do at the firm," said Paul Esatto, Senior Partner at Scully, Scott, Murphy & Presser. "We're happy to see that Rovenet has commercialized their technology and is receiving a positive response from the marketplace."

About Rovenet, Inc.

Rovenet is a software development company focused on mobile computing applications that improve productivity and performance, and simplify custom application development. With over 6,000 mobile workers using its computing solutions, Rovenet is fulfilling its mission to provide easy to use, intuitive, and affordable products and services to companies in the health care, government, education, sales force automation, field engineering, inspections/assessments, and project management industries.
